

Comparing plans, reports, and graphs

Comparing plans using NaviPlan's Comparison feature

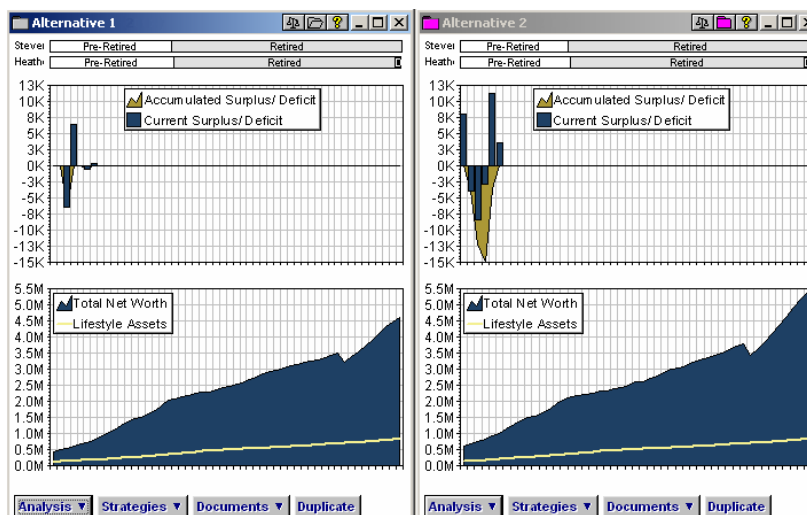

NaviPlan streamlines your plan analysis tasks by letting you compare two plans, two reports, or two graphs side by side on your screen. You can do this quickly and easily instead of having to create, minimize, and re-create each one in order to compare one plan to another.

With your first plan displayed on the screen, click the **Comparison** button on the toolbar in the upper-right corner of the window.

The *Select a Plan* dialog box opens. Choose which plan you would like to use for comparison, and then click **OK**.

You now have a side-by-side view of your two plans; in this example, the Alternative 1 and Alternative 2 plans are compared.

Comparing reports and graphs vertically or horizontally

You can compare two or more different reports or graphs using the *Tile Horizontal* or *Tile Vertical* features in NaviPlan.

Open two or more reports (or graphs) on the NaviPlan desktop. Go to the **Window** menu, and then select either **Tile Horizontal** to view them one above the other, or **Tile Vertical** to view them side by side.
