

Restoring the document package icon

Has your document package icon disappeared from your desktop? The icon vanishes when the document package is opened and then closed using the *Close Window* button (the X), instead of minimized.

To restore the icon to the desktop, go to the **File** menu, and then select **Open – Document Package**. The *Open Document Package* dialog box displays. Select the document package you want to restore to your desktop.

When you are done, click **OK** and the *Document Package* icon will reappear on the desktop.
