

Change the appearance of a graph to suit your needs

From the *Graphs* menu, select the graph you want to create. Right-click the graph to display a list of options you can change on the graph. You can change the type, group, color, pattern, polymarker, or line options.

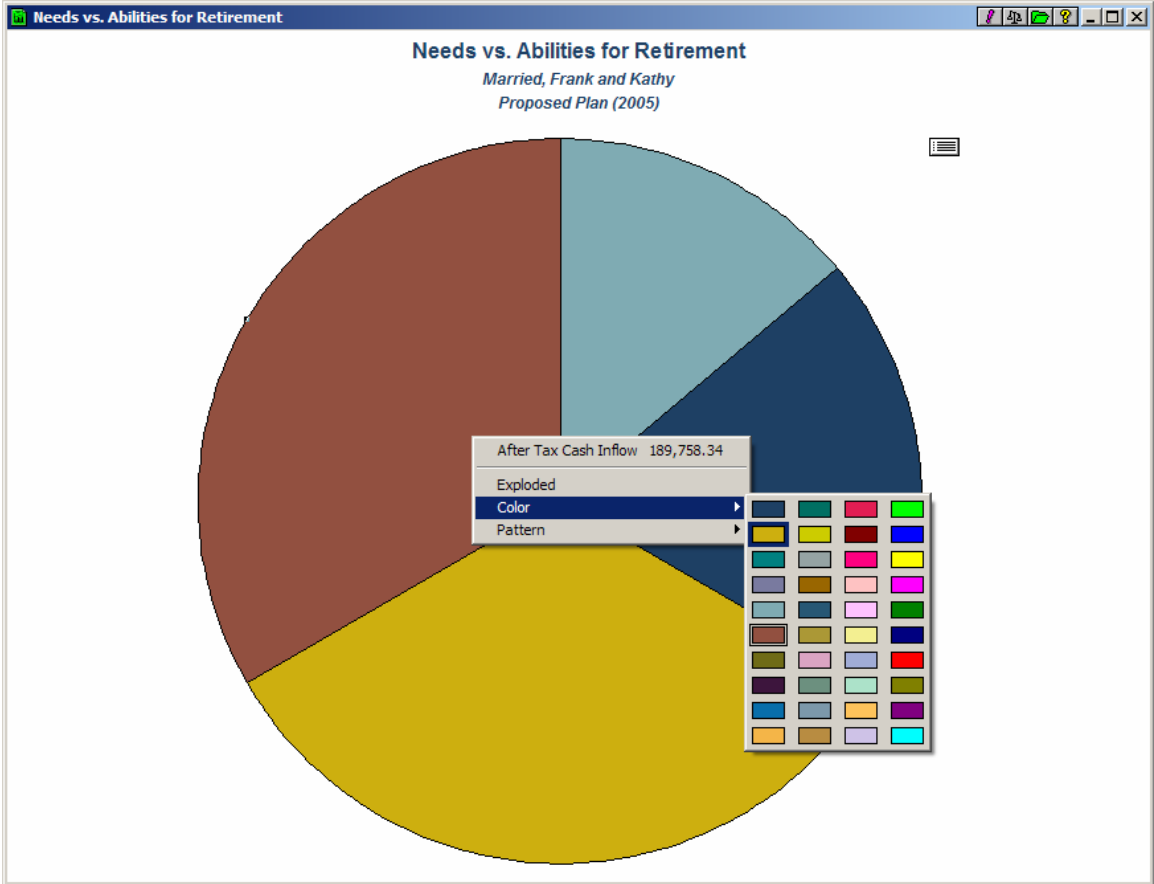

This example shows you how to change the type to *Pie*. First, right-click the graph, and then select **Type – Pie**.

This example shows you how to change the color of the graph sections, bars, or lines. First, right-click one of the graph sections, and then choose **Color** from the menu. When the color selection box appears, click the color you want to use for that graph section.

You can also change the pattern of the graph. Right-click one of the graph sections, and then choose **Pattern** from the menu. Select the pattern you want to use for that graph section.

To print your graphs, minimize the graph window to an icon on your desktop. Drag and drop the graph icon onto the printer icon. The *Printer* dialog box opens and you can either change the settings for the current printer or choose a different printer. If you want to print the graph in color, select a color printer from the *Device* list, and then select **Options – Color**. When you have changed the printer options and properties, click **Print**.
